Environment - definition of environment by The Free Dictionary

Like heredity, environment also has been found to play a very important role in determining the behaviour and personality development of an individual. The environmental influences are those which act upon the organism at the time of its growth and development. Both heredity and environment influence an individual's personality traits. Although a person's environment plays an important part in his personality development, heredity factors play a major role in determining his/her group, class, or status. The environment is the conditions that surround someone or something - the conditions and influences that affect the growth, health, progress, etc., of someone or something. See more meanings of environment.

Heredity, also called inheritance or biological inheritance, is the passing on of traits from parents to their offspring. It is the process by which one's genes and chromosome are passed on. Heredity, environment, and situation determine an individual's phenotype.

Time travel, the environment rather than heredity, providing the best available evidence for the importance of environmental influences on personality, psychological development, and human behavior.
